Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 19-22 and 32-58 are, drawn to an amusement article, classified in class 119, subclass 709.
- II. Claims 23-31 are, drawn to a process for imparting microbe-inhibiting properties, classified in class 119, subclass 174.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process. (MPEP 806.05(f)). In the instant case, the process can be used to apply a microbe-inhibiting agent to other devices such as pillows, padding, furniture, etc..

IF APPLICANT ELECTS GROUP I, THEN THE FOLLOWING ADDITIONAL RESTRICTION APPLIES.

- I. Claims 19-22 and 47-49 are, drawn to the combination non-woven material and a microbe-inhibiting agent, classified in class 119, subclass 702.
- II. Claims 40-44 are, drawn to the subcombination, an article with high loft, low-density fibrous material, classified in 119, subclass 28.5.
- III. Claims 45, 46 and 56-58 are, drawn to the subcombination, an article with high-pile component attached to a backing material, classified in 119, subclass 702.

Inventions I and II, and I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the micobe inhibiting agent could be sprayed or dipped onto the element, instead of applied. The subcombination, Invention II has separate utility such as pillows, furniture etc. Additionally, the subcombination, Invention III has separate utility such as rugs and/or carpets.

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as pillows, beds, padding, etc... See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and III, restriction for examination purposes as indicated is proper.

A telephone call was not made to John E. McGarry on April 21, 2002 to request an oral election to the above restriction requirement.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
